

VOEN- hibernation with permanent protective sheet

The expanders to wrap covers are fixed in distance of around 1,20 meters at the top cable.

The expander can be pre-installed at the top cable in winter time. They are in dependence of cover width between 70 and 80 cm long.

The black protective sheet is secured in summer time at the top clip with a cable clip. The black sheet can stay all time in the orchard.

It is also possible to roll down and to store the black plastic before the season starts.

After rolling the VOEN covers to the top and fixing them with the expanders the black plastic is opened and rolled around.
